

MIDEG DUGAROVA

TECHNICAL PRODUCT MARKETING · AI & DEVELOPER TOOLS

Berlin, Germany · midegdugarova@gmail.com · [LinkedIn](#) · [Portfolio](#) · [GitHub](#)

SUMMARY

Technical product marketer with six years in open-source developer tooling. I work on positioning, technical GTM, and developer adoption for products where the technical details materially change the story. Mathematics and computer science background; Python and Rust. Recent work covers LLM observability, evals, vector search, and production agent tooling.

SELECTED AI / DEVELOPER TOOLING WORK

Operating Production Agents · 2026

github.com/midegdugarova/operating-production-agents

- Seven-module hands-on course that hardens one support-triage agent across tracing, evals, reliability, cost and latency routing, guardrails, and a production runbook.
- Instrumented the tracing/eval loop with Langfuse while keeping a local JSON fallback, so learners can test the workflow before an account or API spend becomes a prerequisite.

Selected technical analysis: Langfuse vs. LangSmith trace-to-eval workflow; Qdrant production failure modes; LLM tracing architecture; Langfuse first-run DX notes. [Portfolio](#)

EXPERIENCE

Technical Educator → Technical Education Lead

Jun 2025 – Apr 2026

Web3 Foundation · *Remote*

- Promoted after seven months to own technical education strategy and the ecosystem content roadmap. Led developer positioning, marketing, and education for Polkadot Virtual Machine (PVM) smart contracts, translating the technical capability into a clear builder narrative and launch materials.
- Designed the Polkadot Builder Party as an acquisition experiment, deliberately using Devpost to reach beyond the existing ecosystem: 2,000+ participants, 400+ submissions, and 60% self-reporting as new to the ecosystem.
- Owned Polkadot's primary technical documentation for developer audiences (the Polkadot Wiki), restructuring key sections around the path to first success and keeping them accurate through SDK and runtime changes.
- Turned 400+ pieces of developer feedback into a structured friction report that fed documentation priorities and the product roadmap; several DX fixes shipped from it.

Growth and Marketing Lead (inaugural)

Nov 2023 – Mar 2025

Evmos · *Berlin*

- Built the growth and marketing function from zero and owned positioning, messaging, and go-to-market across a developer-adopted public chain and evmOS, an enterprise SDK sold to executive buyers.
- Owned the enterprise narrative for evmOS, reframing a blockchain SDK as a production-grade platform and building the business case and pitch deck used by the CEO in executive conversations; 20+ teams adopted evmOS in four months, including Ripple and Haqq Network.
- Owned launch messaging for the Evmos dApp Store and EVM precompile releases; the dApp Store settled into a durable 4–5 new partner integrations per week beyond the launch window.
- Built the developer support and onboarding path from first contact to production integration, then brought 30+ partner teams through to live integrations.
- Shipped 20+ technical blog posts, launch narratives, and long-form documentation while maintaining technical accuracy across fast-moving releases.

Developer Relations Lead

Mar 2023 – Nov 2023

Astar Foundation · *Remote*

- Led the WebAssembly smart-contract launch. When strong launch attendance failed to translate into deployments, diagnosed the gap as positioning and education rather than distribution, then reshaped the developer narrative around what builders could actually build.
- Designed and recorded the ecosystem's first educational course on Rust smart-contract development, creating a guided learning path that directly addressed the adoption friction uncovered after the launch.
- Co-planned the developer side of a Rust SDK launch and owned the documentation GitHub repo, triaging issues and PRs with engineering and closing SDK-doc gaps.

Ecosystem Success Manager

Nov 2019 – Mar 2023

Parity Technologies · *Berlin*

- Built the ecosystem health dashboard across GitHub development activity, community growth, and vertical KPIs; quarterly reports fed C-level strategy and funding decisions.
- Ran the Substrate Builders Program, taking 40+ teams from concept to production as each team's primary technical and strategic contact.
- Created Square One, a guided onboarding program with technical support, reference architectures, and routing to the right engineering contact for each project.

Business Development Working Student

Sep 2018 – Nov 2019

Sensorberg GmbH · *Berlin*

- Supported inbound and outbound lead generation for a B2B IoT / smart-building SaaS and produced early-stage sales collateral.

EDUCATION

Technical University of Berlin — Mathematics & Computer Science coursework

University of Glasgow — MA Political Science, 2018 · European Commission Full Scholarship

Lomonosov Moscow State University — BA International Relations, 2016 · Presidential Scholarship

SKILLS

Product marketing: positioning, category narrative, competitive analysis, launch GTM, developer and economic-buyer segmentation.

Growth & DX: developer activation, funnel analysis, experimentation, adoption measurement, onboarding and documentation as a product.

Technical: Python, Rust, Git, Langfuse, LLM observability/evals, vector search, data analysis and BI.

Technical writing: developer documentation, technical deep-dives, SDK/API guides, tutorials, launch explainers, and developer education.

Languages: English (C2), Russian (Native), German (C1), Spanish (B1).
